- To work on estimation proposal and to drive the team from Project start to end (Design, Development, Testing, Review, Implementation and Support).
- To be responsible for the development activities and quality of work delivered.
- To engage with clients in understanding their requirements during development/implementation of the solution.
- To understand data within the application and its mapping and assimilation (Ex: MuleSoft, BI).
- To guide / coach the development team on efficient delivery and also to support the team on other technical challenges.
- Point of escalation for other members of the team in challenges they face with their code
- Ensure that all applications have the latest security patches and are updated to necessary versions
- Communicate and showcase the best practices to the team of coding standards and development
- Be responsible for the software delivery process and ensure the team complies with the process
- To delegate tasks to team members and work with team collaboratively.
- Technical reviewer for the RFC raised for Mendix applications.

Skills

- Experience of delivering on-premise and cloud-based, customer facing and internal applications
- Ability to prioritise effectively
- Self-motivated, proactive and a team player
- Attention to detail and quality focus
- Use and implementation of Agile methodologies and terminology
- Ongoing support and mentoring and be a go-to person for the team.
- Have excellent interpersonal, oral and written communications skills.
- Enjoy problem solving and be logical.
- Be able to work under pressure in a fast-paced environment.
- Be able to take responsibility for a piece of work from start to finish.
- Supports users by developing documentation and assistance tools.
- Keeping up-to-date with industry trends and technology developments.

Behaviours

- Ability to be able to discuss topics technically as well as speaking plain English to non-technical people
- Not easily panicked or pressured in difficult decision making scenarios
- Well presented individual

Knowledge

- An understanding of the architecture of the digital applications and their dependencies
- Understanding of agile development (SCRUM) and best practices
- Experienced with low code development methodologies (i.e. Mendix, Appian etc)
- Knowledge and experience in other development environments such as Java or Microsoft .NET
- Experience in project management tools (JIRA, TFS etc)
- Basic understanding on Application testing.
- Well versed in MS office tools aiding in Business / Client Presentation.

Specific candidate requirements

- Fluent in written and spoken english

Qualifications

- Desired to have an advanced Mendix Advanced Certification
